Curriculum Vitae

About me

Code must get better. Every day. Every time. Every line. A relentless passion for better code is what drives me late at night to read about new technologies, new tools, and new languages, and has brought me a long ways in a short few years. But I'm nowhere near where I want to be. In programming, with its ever-changing languages and technologies, there is always something to be excited about, with fun and incredible things awaiting to be built. I feel there is so much to learn, yet so little time...

I've been solving problems for the past 15 years, first as a physicist fascinated by the beauty and complexity behind nature's laws, and nowadays as a software developer working on solving practical problems in the most efficient and clean way. Although different problems require different tools, the underlying thinking is usually the same, namely consistent logic, big-picture analysis, generalization of specific solutions, and looking at edge cases, whether working with a differential equation or writing a unit test. These are the concepts I work hard to become better at everyday.
