

Inaki Anduaga

VP Engineering | AI-Native Engineering Transformation

About me

Driving change. At maximum speed. With uncompromising quality. I have always been driven by learning fast, challenging the way things are done and using technology to give businesses a competitive advantage. Today, that means helping engineering teams move beyond AI-assisted coding toward AI-native software delivery: autonomous agents, fast feedback loops and quality built into every step.

I combine engineering leadership—running complex projects, shaping strategy and building high-performing teams—with hands-on experience at the leading edge of agentic development. I push engineering boundaries through the complex projects I lead, turning what I learn into practical processes. The objective remains simple: better products, delivered faster, with teams and architectures built for sustainable growth.

Professional Experience

2023–present **VP Engineering**, *zvoove*, Munich, Germany.

Leading engineering innovation and delivery for enterprise ERP products and integrations, including a completely new agentic ERP for temporary staffing. Working across architecture, cloud strategy, staffing, budgets and international delivery teams; partnering with product leadership, the CEO and the board on technical strategy.

- **Autonomous software factories:** Led the shift from AI coding assistance to agent-driven delivery, combining long-running coding agents, automated multi-model PR reviews, agent-guided merge decisions and iterative fixes. As code generation accelerates, verification becomes the next engineering challenge; introduced ticket-level, production-like ephemeral environments to shorten the build–test–deploy feedback loop.
- **Months to days:** One example among many AI-native deliveries across teams: a DocuSign-like digital-signature module built in four days of continuous agentic development, plus a few days of polish. One engineer and one product manager delivered a richer solution—email, 2FA and AI-assisted document detection—than an earlier version that had required two engineering teams roughly six months.
- **AI-native product development:** Reworked the flow from product idea to implementation. Turned discussions into AI-assisted specifications and usable UI concepts in minutes, avoiding sequential hand-offs and bringing in UX specialists for polish when needed. Built complex ERP features, including cross-entity fuzzy search, through short agent-driven iterations.
- **Automated maintenance:** Extended agentic workflows beyond feature development into ongoing engineering upkeep. Examples include overnight AWS "Night Watch" agents flagging infrastructure anomalies and security findings, and automated feature-flag cleanup. Findings generate actionable tickets for autonomous follow-up, complemented by asynchronous architecture and code-quality reviews.
- **Smaller, stronger teams:** Reshaped delivery around lean, high-agency engineering teams, reducing coordination overhead and emphasizing learning speed, critical judgment, ownership and the ability to verify AI-generated work—without losing sight of operational resilience.
- **Broad engineering delivery:** Led and delivered on schedule a cross-platform mobile app, document storage solution, a unified central API connecting on-premise and SaaS ERP data, and an Insights BI platform—all within a complex legacy and hybrid-cloud environment.

inakianduaga

2023–2026 **Fractional CTO / Technology Advisor**, *Independent*, Remote, US startups.
Advised US startups on technology strategy, architecture, cloud scalability and engineering practices. Delivered an agentic customer-support solution for HVAC installation inquiries and upselling in three months, and an agentic social-media solution with customer-defined natural-language flows for upselling and e-commerce product recommendations.

2023–2024 **Director Technology**, *Edenspiekermann*, Berlin, Germany.
Owned technical delivery for client products, from planning and staffing through architecture and launch. Delivered a cross-platform React Native product for an energy-sector client, rolled out across multiple countries with a near-shore team.

2021–2022 **Smyle Management Team**, *AutoScout24*, Munich, Germany.
Defined priorities and execution strategy for the online car-sales business. Led a distributed team of **30 engineers across three countries** to launch the smyle MVP in **six months**, from design to first car sold online; subsequently built a high-performance business and product analytics platform.

2017–2021 **Principal Software Engineer / Lead Engineer**, *AutoScout24*, Munich, Germany.
Drove architecture, engineering practices and cross-team technical leadership. Simplified systems and improved cloud efficiency, delivering **$1M+ in savings on recurring AWS infrastructure costs**.

2013–2016 **Full Stack Developer**, *tado*, Munich, Germany.
Built and operated the main website and commerce infrastructure end to end, spanning frontend, backend, cloud provisioning, data migrations, deployment and performance.

2010–2013 **Founder**, *TheCouponbay.com*, USA / Munich.
Built and operated a self-funded online affiliate business from scratch, generating roughly **$500k in revenue** over four years without external investment.

Expertise

AI-native delivery — Autonomous software factories, agent orchestration, AI code review, long-running agents, automated verification, ephemeral environments, AI-assisted product discovery.

Leadership — Engineering strategy, organizational transformation, hiring and coaching, team design, budgeting, multi-country delivery, executive stakeholder management.

Engineering — Cloud architecture and FinOps, AWS, Azure, Kubernetes, serverless, infrastructure as code, CI/CD, observability, APIs, data platforms.

Hands-on — TypeScript, Python, Scala, software architecture, full-stack development, systems performance and automation.

Education

2004–2010 **Ph.D. in Physics**, *University of Illinois Urbana-Champaign*, USA.
Theoretical condensed matter physics.

1998–2004 **Bachelor's in Physics**, *Instituto Balseiro / UNLP*, Argentina.

Languages

English (fluent, C2) Spanish (native) German (intermediate)
